

Statistically Reliable Difference-in-Differences Treatment Effects

Estimates Relative to Unexposed Control Condition (Net of Exposure Drift, $p < 0.10$)

Panel A: Pooled Sample (Overall Influence)

Low-Status Like

Generalized Dislike

High-Status Dislike

Panel B: High-Status Consistent (Middle Class, College)

Like / Low Status

Dislike (No Status)

Dislike / Low Status

Panel C: Status-Inconsistent Groups

Dislike (No Status) (Working / College)

Dislike / High Status (Working / College)

Like (No Status) (Middle / No College)

DiD Treatment Effect (Change in Treatment – Change in Control)
